

**SAVE THE EARTH
AND TIME
WITH INSINKERATOR**

in sink erator®

AN ENVIRONMENTALLY RESPONSIBLE SOLUTION FOR MANAGING COMMERCIAL FOOD WASTE.

InSinkErator food waste disposal systems in restaurants and institutional settings provide outstanding environmental benefits, increase staff efficiency and significant cost reductions.

- Food scraps are ground and disposed of within seconds as the disposal system is connected to the existing sewerage infrastructure and never requires emptying.
- Environmentally responsible option. Food waste disposed of using a disposal system is sent to a wastewater treatment plant (Wwtp). Many treatment plants are able to convert ground food scraps into renewable energy.
- Reduce staff trips to the skip bins and waste-hauling costs.
- The InSinkErator SS Series Disposal Systems come with an AquaSaver®. The AquaSaver acts as an on-demand water saving system for the disposers. It takes the onus off the user to control the water usage and automatically delivers only the water necessary for efficient use.

With a range of sizes and models, we have a food waste disposal system to suit any size of operation.
